a fixed dental brace

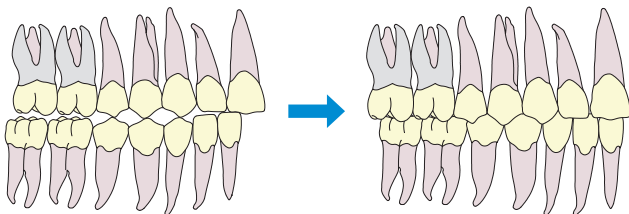

BioBiteCorrector®

The easy way to correct an overbite in combination with a fixed dental brace

This version of the BioBiteCorrector® (BBC) brace is used when patients already wear a dental brace fixed with brackets.

The BioBiteCorrector® brace is designed to correct an overbite. An overbite means your lower jaw is too far back, relative to your upper jaw, and your teeth do not bite properly.

improper bite

proper bite

Advantages:

- Quick Result
- The appliance does not require any active cooperation and works 24 hours a day; this is why it is so successful. Your lower jaw position will be corrected faster, compared to the use of elastics (rubber bands).
- Proper bite
- The BBC moves your lower jaw in the right position, so that your teeth bite properly. The BBC can help you to avoid removing permanent teeth or treatment with a headgear.
- Hardly visible
- The BBC is hardly visible from the outside
- High wearing comfort
- Modern technology allows you to widely open your mouth, with sideward movements.
- Biocompatible material
- The BBC telescope is made entirely of titanium and laser-welded.
