BioBiteCorrector[®] Twin

The removable
dental brace
for overbite correction

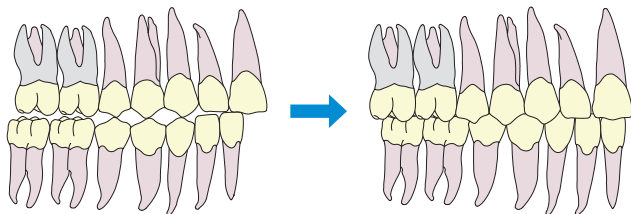

BioBiteCorrector® Twin

The removable dental brace for overbite correction

The BioBiteCorrector® Twin is a dental brace, also known as a functional orthodontic appliance.

This version of the BioBiteCorrector® Twin brace is a removable appliance designed to correct an overbite. An overbite means your lower jaw is too far back, relative to your upper jaw, and your teeth do not bite properly.

improper bite

proper bite

Advantages:

- **Proper bite**

The BBC moves your lower jaw in the right position, so that your teeth bite properly. For this removable brace to work, you as the patient will have to actively cooperate.

- **High wearing comfort**

The brace is made of two parts to ensure high wearing comfort. The two bases in the upper and lower jaws are firmly held in place. This leads to optimal wearing and speaking comfort and makes the treatment very successful.

- **Biocompatible material**

The BBC telescope is made entirely of titanium and laser-welded.

- **Hardly visible**

The BioBiteCorrector® Twin is hardly visible from the outside.
